

**RE80 SELECTORIZED SERIES**
**RE8025 - LEG CURLEXTENSION**

**PRODUCT OVERVIEW**

The ultimate leg training machine! Two-in-one design provides the ultimate lower body training solution. Innovative dual-function design perfectly integrates leg extension and leg curl training. Precise joint pivot points and multi-dimensional adjustment system ensure movement patterns perfectly align with ergonomics. User-friendly seat combined with precision weight system delivers exceptional balance between effectiveness and comfort.

# SPECIFICATIONS & KEY FEATURES

## Specifications

Dimension	1530*1170*1602mm
Total Weight:	272kg
Weight Stack:	105kg
Max Weight Stack:	117.5kg

## Product Features

### Dual-Function Multi-Dimensional Design, Breaking Leg Training Boundaries

Dual-function design enables seamless switching between leg extension and leg curl training. "Zero-slack resistance travel design" ensures immediate resistance engagement at movement initiation, making every rep solid and effective. 5-position leg pad adjustment, 4+3-position knee joint adjustment, and 7-position ankle adjustment form an extremely precise multi-dimensional adjustment system, perfectly accommodating different body types.

### Precise Knee Joint Pivot, Enhanced Contraction

Through extensive data sampling and biomechanical testing, we've identified the optimal pivot point position perfectly aligning with knee joint movement axis, maximizing efficiency in both quadriceps and hamstring training.

### EStable Positioning for Precise Training

Semi-circular leg pad provides superior thigh contact during leg curl training, delivering exceptional comfort. Combined with dual top handles design for further body stabilization, delivers optimal training results! During leg extension training, the pad can be rotated for storage without interfering with the exercise!

### Eight-Position Adjustable Backrest, Perfect Balance of Comfort and Efficiency

Closely spaced eight-position adjustment holes perfectly match different body types. Backrest position variations enable precise targeting of different quadriceps regions, ensuring comfortable positioning and precise training!

### Two-Stage Seat Design, Stable Support

Innovative two-stage seat design with thickened front section provides stable knee joint support. Ergonomically engineered height difference ensures every bit of force targets intended muscles. Quick-adjust handle enables smooth training flow with adjustments possible without dismounting.
