

SA SELECTORIZED SERIES
SA008 - ASSISTED CHIN/DIP

PRODUCT OVERVIEW

Professional-grade compound assistance trainer - the ultimate upper body progression tool. The biomechanically designed retractable leg support perfectly replicates natural bodyweight training patterns. The machine offers four pull-up variations, hanging leg raises, and dip exercises. The precision weight system ensures optimal training resistance regardless of strength level.

SPECIFICATIONS & KEY FEATURES

Specifications

Dimension:	1724*1240*2135mm
Total Weight:	277kg
Weight Stack:	100kg
Max Weight Stack:	125kg

Product Features

Robust and Durable, Value-Optimized Choice

The main frame utilizes Q235A high-frequency cold-rolled steel, with 40*140mm square tubing and 50*100mm oval tubing working in harmony to ensure machine durability. Surface finishing employs electrostatic powder coating, passing over 800 hours of salt spray and impact testing. The finish is brilliantly aesthetic while the machine remains incredibly durable.

Multi-Handle Design, Upper Body and Core Training

The top multi-handle design offers wide pronated grip, narrow pronated grip, narrow supinated grip, and neutral hammer grip pull-up variations for comprehensive back training. The middle parallel bars and back support enable dip exercises and hanging leg raises, allowing one machine to effectively train the entire upper body and core.

User-Friendly Assistance Design, Natural Movement Pattern

The retractable leg support design provides precise force assistance for pull-ups and dips. When assistance isn't needed, the leg support easily stores away without interfering with other exercises. The anti-slip foot platform design makes mounting and dismounting more convenient.

Precision Weight Stack Engineering, Professional Training Assurance

Utilizing a high-density cast iron weight stack system with specialized black textured powder coating for premium feel. Special protective coating ensures wear and corrosion resistance, providing lasting durability for professional training. The weight distribution is precisely calibrated, with maximum weight reaching 125kg, allowing you to easily find that "perfect training weight" without compromising.
