2. Product Overview

The RE5A center-drive elliptical trainer features a balanced and stable frame structure with ultra-smooth operation. Equipped with a mid-mounted drive system for even load distribution, the unit delivers steady and quiet performance during workouts. Its motion path conforms to the body's natural movement, and the low-impact design effectively protects joints. The compact footprint saves valuable floor space, while overall equipment durability has been fully improved.

As the upgraded version of the RE5 elliptical trainer, the RE5A features a revamped display panel, replacing the original standard screen with an acrylic touch control display.

The acrylic material boasts outstanding scratch resistance, wear resistance and impact resistance, resisting scratches and aging damage effectively to greatly extend the service life of the screen. It maintains crisp display and responsive touch control even under frequent daily operation.

A three-color breathing light is installed on the top of the display: blue for standby mode, green for workout status, and red for stop mode, allowing instant recognition of machine operating status.
